

BrineGuard 9000

Brine Tank

The ideal solution for storing and handling brine in operations. It combines the lightness of plastic with the strength and durability of a seamless construction.

Specifications

- single-wall tank with a volume of 9000 l
- made of polyethylene - light, but at the same time very strong and resistant to corrosion and chemicals
- rotational moulding technology ensures a seamless construction that eliminates the risk of leaks and increases mechanical resistance
- equipped with a dispensing device for easy and efficient handling of brine
- filling, mixing and brine dispensing functions – all in one device
- reliable operation is ensured by a high-quality AISI316 stainless steel pump (body and impeller), very resistant to corrosion
- nominal pump flow 430 l/min
- all fittings in PVC, dispensing end in AISI 316
- weight 300 kg.
